

RAPID ASSESSMENT AND DEVELOPMENT (RAD)

RAPID ASSESSMENT AND DEVELOPMENT

RAD is a bold approach to business improvement and technology development- it's more than simply a technology assessment and solution, more than just a business-process assessment and solution. It enables you to achieve dynamic, high-quality, cost-effective results in an accelerated time frame. RAD is a two-day business assessment workshop involving your key process leaders and covering four to five core business processes. Subsequently, a one to two week follow-up evaluation and design period produces a complete and successful solution plan.

BUSINESS ASSESSMENT WORKSHOP

A typical RAD session consists of 1 to 3 days of meetings among breakaway consultants and the client business process experts, owners, participants, and stakeholders. Following the meetings, breakaway consultants review the supporting materials, document the clients' business processes and develop an RAD session output and solution plan. After the two-day workshop, we spend one to two weeks analyzing the findings. We determine the schematic constraints and areas for systemization. With this information, we jointly develop a proposal outlining solutions that can be implemented within two to four months. Solutions leverage both technology and process improvements. RAD sessions typically focus on a single business process. Multi-day sessions can focus on two to four related processes. Examples include actual reporting, consolidations, budgeting at one level of the organization, driver-based planning, rolling forecast, inventory management, and salary planning.

PROCESSES AND SOLUTIONS

RAD produces custom, state-of-the-art desktop applications that access your current platforms. Each application is a web-enabled, online, real-time desktop solution with simultaneous data access and manipulation capability by multiple, concurrent users. RAD session output is delivered to the client very quickly (in less than one week). Implementation of typical end-solution plans average two to four months using a joint development team. Large enterprise projects may take longer. The initial assessment workshop is a standard fixed fee that varies based on the number of processes that are analyzed.

THE BREAKAWAY DIFFERENCE

We assess processes rapidly and thoroughly, whereas the competition takes two to three months. Breakaway commits chief thought leaders with both technology and business analysis backgrounds to each project. We have extensive industry expertise in Financial Services, Retail, Life Sciences, and Manufacturing. Our overall goal is to work together on the workflow process and technology enablers to move from time spent on manually intensive data management to time spent on value-added activities of business support and actionable analyses.

About Triple IT, inc.

Triple IT delivers superior business solutions by using and recommending technologies that add value to our clients' business decision process, while providing the scalability that enables growth. We focus on solutions and results, and are constantly identifying ways to help our clients gain a competitive advantage, reduce operating costs, and assess performance across the enterprise.
